Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: Mr. Guynn presented a new claim 1 which better describes the latent dual cure and mechanical interactions of the dental composition. The claim appears to distinguish the invention over the prior art. Further consideration will be given once the official amendment is presented to the Office. The references used in the rejection, such as Mitra et al fails to teach a latent dual cure, Mitra really is only concerned with photosensitive curing, wherein chemical curing is an alternative. Fisvher is not concerned with deformable layers. Ario et al has two different layer that comprise different modes of curing, that is one layer is completely cured using irradiation while the other is completely cures using a chemical initiator. In addition, Ario is not concerned with any layer having a deformable characteristics.
